Dear Donald,

This letter is to confirm that we have tested and approved the use of our hydraulic submersible pumps with the C.I.Agent® EVAC Filtration System. The following pump products are included in this certification:

- Catalog #H4665A 2" Submersible Water Pump
- Catalog #H4660B 2-1/2" Submersible Water Pump
- Catalog #H4635 3" Submersible Trash Pump
- Catalog #H4670 4" Submersible Trash Pump

Pump performance and life is not affected by this filtration system. As with all powered tools, a scheduled preventive maintenance program should be followed on these pumps to ensure consistent performance, long life and ensure leak free seal joints. The C.I.Agent® EVAC Filtration System filter only produces a minimal back pressure (~1 psi) on the outlet of the pump. We 100% test all of our pumps to validate operation with both full open and full closed (dead-head) water flow conditions. Therefore, the pump can be operated even in highly clogged filter conditions. The C.I.Agent® EVAC Filtration System filter should be serviced regularly to maximize pump flow performance and to efficiently complete vault/manhole evacuation work. All of our pump products are proudly made in the USA.

Please feel free to contact me with any questions.

Sincere Regards,

Ron Axon
Sr. Product Manager
